

Geometry and Algorithms for COMPUTER AIDED DESIGN

Erich Hartmann

Department of Mathematics
Darmstadt University of Technology
October 2003

Contents

1	INTRODUCTION	7
1.1	Methods for DISPLAYING objects	7
1.2	On the contents	8
1.3	Software for displaying curves and surfaces	9
1.4	On literature	10
2	TOOLS	11
2.1	Structure of a CAD-program	11
2.1.1	Global constants: The file "geoconst.pas"	11
2.1.2	Globale types: The file "geotype.pas"	11
2.1.3	Globale variables: The file "geovar.pas"	11
2.1.4	Capability of the graphics software	12
2.2	Functions on \mathbb{R} , operations with vectors	14
2.2.1	Functions on \mathbb{R}	14
2.2.2	Operations with vectors	14
2.3	Routines to Analytic Geometry	17
2.3.1	Polarangle and quadratic equation	17
2.3.2	Intersection line–line, circle–line, circle–circle	17
2.3.3	Equation of a plane	18
2.3.4	Intersection line–plane	18
2.3.5	Intersection of three planes	18
2.3.6	Intersection of two planes	19
2.3.7	ξ - η -coordinates of a point in a plane	19
2.3.8	Coordinates with respect of a new 3D-coordinate system	19
2.4	Numeric: GAUSS-elimination, NEWTON-iteration	19
3	PARALLEL/CENTRAL-PROJECTION	21
3.1	Orthographic Projection	21
3.1.1	The projection formulae	21
3.1.2	Procedures for orthographic projection	22
3.2	Central projection	23
3.2.1	The projection formulae	23
3.2.2	Procedures for central projection	24
4	CURVES	27
4.1	Planar Curves	27
4.1.1	Definition and Representations of Planar Curves	27
4.1.2	Arc length and curvature of a planar curve	28
4.1.3	Offset Curves	30
4.1.4	The normalform of a planar curve	30

4.2	Displaying Parametric Curves in \mathbb{R}^2	32
4.3	Displaying implicit curves	33
4.3.1	Marching algorithm	33
4.3.2	Raster algorithm	35
4.4	Intersection of two planar curves	37
4.4.1	Intersection of a parametric curve and an implicit curve	38
4.4.2	Intersection of two implicit curves	38
4.4.3	Intersection of two parametric curves	39
4.5	Foot points on planar curves	39
4.5.1	Foot point on a parametric curve, curve inversion	39
4.5.2	Foot point on an implicit curve	40
4.5.3	Stable first order foot point algorithms	41
4.6	Bézier-curves	42
4.7	Applications of the normalform	43
4.7.1	Offset curves of implicit curves	44
4.7.2	Bisector curves	45
4.7.3	Numerical Parameterization of Curves	46
4.8	Space Curves	46
5	SURFACES	49
5.1	Definition and Representations of Surfaces	49
5.2	The First and Second Fundamental Forms of a Surface	50
5.2.1	The first fundamental form, arc length	50
5.2.2	The second fundamental form, curvature	50
5.3	Offset surfaces	52
5.4	Normalform of a surface	52
5.4.1	Definition of the normalform	52
5.4.2	On the first and second derivatives of the normalform of a surface	53
5.4.3	C^n -contact, G^n -contact	55
5.4.4	G^2 -continuity theorems	56
5.4.5	The curvature of an intersection curve	57
5.5	Normalform of an implicit surface	58
5.6	Normalform of a parametric surface	59
5.7	Foot point on a parametric surface, surface inversion	60
5.8	Stable first order foot point algorithms for surfaces	61
5.8.1	Foot point algorithm for parametric surfaces	61
5.8.2	Foot point algorithm for implicit surfaces	61
5.9	The normalform of a space curve	62
5.9.1	Definition of the normalform	62
5.9.2	Foot point algorithm and evaluation of the normalform of a space curve	63
5.9.3	Determining foot points on an intersection curve	64
5.10	Applications of normalforms	64
5.10.1	Approximation of a set of intersecting surfaces	64
5.10.2	Approximation of intersecting pipe surfaces	65
5.10.3	Numerical parametrization of implicit surfaces	65
6	HIDDENLINE-ALGORITHM FOR NON CONVEX POLYHEDRONS	67
6.1	The Hiddenline-Algorithm	67
6.2	Auxiliary procedures for the hiddenline algorithm	71
6.2.1	The procedure <code>aux_polyhedron</code>	71
6.2.2	The procedures <code>aux_quadrangle</code> , <code>aux_cylinder</code> , <code>aux_torus</code> and displaying a parametrized surface	71

6.3	Intersection of faces, intersection of two polyhedrons	74
6.3.1	Intersection of faces bounded by planar polygons in \mathbb{R}^3	74
6.3.2	Intersection of two polyhedrons	76
6.4	IS line–polygonal patch, IS polygon–polyhedron	78
6.4.1	Intersection of a line segment and a planar polygonal patch	78
6.4.2	Intersection points of a polygon and a polyhedron	79
7	TRIANGULATION OF IMPLICIT SURFACES	81
7.1	The triangulation algorithm (marching method)	81
7.1.1	The idea of the algorithm	81
7.1.2	The procedure <code>surfacepoint</code>	83
7.1.3	The data structure	83
7.1.4	Step S0	84
7.1.5	Step S1	84
7.1.6	Step S2	84
7.1.7	Step S3	85
7.2	Examples	87
7.2.1	Sphere	87
7.2.2	Cylinder	88
7.2.3	Torus	88
7.2.4	Set of two intersecting surfaces	88
7.2.5	G^2 -continuous blending of three cylinders	89
7.3	Sample program: <code>trisample.p</code>	91
7.4	Ray tracing of triangulated surfaces with POV-Ray	92
8	INTERSECTIONS: CURVE – SURFACE, SURFACE – SURFACE	93
8.1	Intersection Curve – Surface	93
8.1.1	IS parametric curve – implicit surface	93
8.1.2	IS implicit curve – implicit surface	93
8.1.3	IS implicit curve – parametric surface	94
8.1.4	IS parametric curve – parametric surface	94
8.2	Intersection surface – surface	94
8.2.1	IS of two implicit surfaces	94
8.2.2	IS of an implicit and a parametric surface	96
8.2.3	IS of two parametric surfaces	96
8.3	Contour lines of surfaces	98
8.3.1	Contour line of an implicit surface	98
8.3.2	Contour line of a parametric surface	99
8.3.3	Contour line of a quadric surface	99
8.4	Hiddenline–algorithm for simple cases	101
8.4.1	Fast normal–test	101
8.4.2	Ray–test for implicit surfaces	101
9	CONICS AND QUADRICS	105
9.1	Conics	105
9.1.1	Ellipse	105
9.1.2	Hyperbola	106
9.1.3	Parabola	107
9.1.4	Equation of a conic	108
9.1.5	Conics in space	108
9.2	Quadrics: ellipsoid, cylinder	108
9.2.1	Ellipsoid	108

9.2.2	Cylinder	109
10	SURFACES OF REVOLUTION, RULED SURFACES, ...	111
10.1	Surfaces of revolution	111
10.2	Ruled surfaces	112
10.3	Developable connections between curves	113
10.4	Coons patches	115
10.5	Canal surface, embankment surface	115
10.5.1	Canal surfaces	117
10.5.2	Embankment surfaces	118
11	BLENDING CURVES AND SURFACES	119
11.1	G^n -blending	119
11.2	Implicit G^n -blending curves and surfaces	119
11.2.1	Parabolic functional splines	120
11.2.2	Elliptic functional splines	124
11.3	Parametric G^n -blending curves and surfaces	127
11.3.1	G^n -blending of parametric curves	127
11.3.2	G^n -blending of parametric surfaces	129
11.4	Blending with rolling ball contact curves	133
12	PROPERTIES OF BÉZIER CURVES	137
12.1	Properties of the Bernstein polynomes	137
12.2	The Casteljau-algorithm	137
12.3	Derivative of a Bézier curve	139
12.4	Degree elevation of a Bézier curve	139
12.5	Bézier spline curves	140
12.5.1	Division of a Bézier curve	140
12.5.2	Smoothness conditions	141
12.6	Rational Bézier curves	144
12.6.1	Rational curves and projective curves	144
12.7	Rational Bézier curves	144
12.8	Conics as rational Bézier curves	145
13	BÉZIER-SURFACES	147
13.1	Tensor product Bézier surfaces	147
13.2	The Casteljau algorithm	148
13.3	Degree elevation	148
13.4	Derivatives of a Bézier surface	148
13.5	Bézier triangular surfaces	149
14	B-SPLINE CURVES	151
14.1	The B-Spline base functions	151
14.2	The de-Boor algorithm	153
A	THE REAL PROJECTIVE PLANE	155
A.1	The real affine plane	155
A.2	The real projective plane	155
A.3	Isomorphism between the two models	156
A.4	Collineations of the real projective plane	157
A.5	Projective equivalency of the conics	158
